Deepak Chada

Full-stack developer — Next.js, Supabase, Stripe

Hyderabad, India (IST) · +91 96404 44459 · deepakreddychada@outlook.com · linkedin.com/in/deepakchada

About me

I build websites and small products for a living. Mostly Next.js on Supabase these days, with Stripe when there is money to collect and GitHub Actions deploying to Vercel in the background. I came into development through four years of test automation, which is the reason my releases are usually quiet. I have shipped around a dozen live sites over the last eighteen months — some for my employer, some direct client work — and I prefer small projects where I own the whole thing from the Figma file to the production domain. I work daily with Claude Code, Cursor and Codex and have strong opinions about where to use them and where not to.

What I work with

Frontend Next.js (App Router), React, TypeScript, Tailwind, shadcn/ui, Framer Motion

Backend & data Supabase (auth, Postgres, RLS, realtime, edge functions), Node, REST, SQL

Payments Stripe Checkout, webhooks, customer portal, subscriptions and one-time flows

Deploys Vercel, GitHub Actions, preview environments, multi-environment releases

Design to code Figma — tokens into Tailwind config, pixel work, component libraries

SEO & AEO/GEO JSON-LD, Next metadata API, sitemap, robots, llms.txt, Core Web Vitals, AI-answer-engine optimisation

Testing Cypress, Playwright, Selenium (Java), Jest, React Testing Library, Postman

Mobile Flutter (Dart) — I ship these at my day job

AI in the workflow Claude Code, Cursor, Codex, Claude, ChatGPT, Gemini, Rocket.new — I review everything they produce

Experience

Full-stack developer, engineering lead · Krava Group Private Limited, Hyderabad · *May 2026 – present*

Lead engineering across six concurrent products — four Flutter apps and two Next.js sites — plus client sites through the agency. Own architecture through deployment; the person stakeholders come to when they want to know if something can ship.

- Shipped Qure Medicals and EV Global on Next.js and Supabase. Server-rendered, SEO tuned, deployed to Vercel through GitHub Actions.
- Built four Flutter apps — Aishv, Konkt, Daksh, Snakt — on Supabase. Auth, Postgres schema, row-level security, realtime.
- Delivered client sites across the agency portfolio — credenceservice.com, alphavetaltd.net, newlifeayurveda.in, dumbox.co.uk, fenze.in, snakt.in, konkt.com, nripropertyhub.co.in, daksh.world, kravagroup.co.in. Figma-first, two to three week turnarounds.
- Wired Stripe Checkout and webhooks into paid flows. Signature checks, idempotency keys, Supabase as source of truth for subscription state.
- Replaced manual builds with GitHub Actions — automated tests, signed APKs on mobile, Vercel deploys on web. Releases stopped depending on one person at a laptop.
- SEO and AEO/GEO from day one — JSON-LD, metadata API, sitemap, llms.txt, content written to be lifted by AI answer engines.
- Brought Rocket.new and AI coding agents into prototyping. Concept to working demo now takes days instead of weeks.
- Review the team's code, set engineering standards, mentor developers on Flutter and Next.js patterns.

Senior QA automation engineer (contract) · Workstam, Hyderabad · *July 2024 – March 2026*

Contract role on enterprise digital transformation programmes in healthcare and retail, with ServiceNow at the centre.

- Built an Automated Test Framework for custom ServiceNow modules — took previously manual regression cycles and made them repeatable.
- Designed Selenium regression suites for client portals. Coverage up by about 60%; release cycles got shorter.
- Automated end-to-end API testing in Postman for the services feeding ServiceNow.
- Worked with BAs and developers to tighten acceptance criteria before build — fewer defects reached QA.
- Supported a HIPAA-compliant telehealth portal and a warehouse order-management system — SLA validation, data accuracy, order status flows.

QA automation engineer · FortunaPix, Hyderabad · *November 2022 – May 2024*

Owned product quality for LernBook and OneLern, K–12 e-learning platforms serving India and the Caribbean.

- Wrote and automated 1,700+ test cases in Cypress. Regression efficiency up about 40%.
- Logged and triaged 600+ defects. Cut average resolution time by about 40% by prioritising role and access issues.

- Fixed frontend bugs directly in HTML, CSS and Svelte when faster than passing them back.
- Validated UI against Figma and Zeplin designs to a 98% match, across web, mobile and desktop.
- Ran negative and security-focused testing. Several high-priority vulnerabilities caught before production.
- Multilingual rollout across English, Hindi and Spanish — calendar formats, curriculum structures, localised media each needed separate test scenarios.

Test engineer · SV Technologies, Remote · *December 2020 – October 2022*

Manual and automated testing for e-commerce and grocery delivery platforms across web and mobile.

- Automated core functional flows in Selenium (Java) and Cypress. Releases noticeably more stable.
- Tracked defects in JIRA; helped set up and maintain the test environments.

Selected work

Qure Medicals · quremedicals.com Next.js + Supabase. SEO-tuned marketing site, Figma-driven components, Vercel deploys via GitHub Actions.

EV Global · evglobal.co.in Next.js corporate site. Reusable components, responsive layouts, automated multi-environment deploys.

Agency portfolio · kravagroup.co.in Flagship site plus client builds — credenceservice.com, alphavetaltd.net, newlifeayurveda.in, dumbox.co.uk, fenze.in, snakt.in, konkt.com, nripropertyhub.co.in, daksh.world.

Aishv / Konkt / Daksh / Snakt Flutter + Supabase. Role-based access, auth, realtime, signed APKs from GitHub Actions.

LernBook & OneLern End-to-end and localisation QA across attendance, admin, messaging and assessment modules for Indian and Caribbean markets.

Education

B.Tech, Computer Science & Engineering — Vignana Bharathi Institute of Technology, JNTUH, Hyderabad (2015 – 2020)

Certifications

Postman API Testing · Explore Identity Foundations · Mastercard Cybersecurity Virtual Experience (Forage) · ServiceNow Admin & Developer (ongoing) · Salesforce Trailhead — Testing, Admin, Marketing Cloud · Verizon Cloud Platform Simulation (Forage) · Wells Fargo Software Engineering Simulation (Forage) · JPMorgan Chase & Co Software Engineering Simulation (Forage) · AI Python for Beginners · Claude 101
